

Enema Hose Penetrating Tip End

Vinyl Hose Comes attached to Bucket

Cut here only if you are going
to use the extension

Rubber Extension Hose Slips Over Vinyl

Please note on the enema bucket's hose a pair of small oval holes exist near the end to allow water to flow should a piece of debris block the end.

Cutting the tip off is to be done only if you choose to purchase and use the optional extension.

If you choose to use the extension, you must cut off the end just behind the oval side holes. If you do not, you will get some leakage at the connection.
